Capitalizing on Nature

Barbier

Capitalizing on Nature Barbier

The basic unit of nature - the ecosystem - is a special form of wealth, which we can think of as a stock of natural capital. However, perhaps because this capital is free, we have tended to view it as limitless, abundant and always available for our use, exploitation and conversion. Capitalizing on Nature shows how modeling ecosystems as natural capital can help us to analyze the economic behavior that has led to the overuse of so much ecological wealth. It explains how this concept of ecosystem as natural capital sheds light on a number of important issues, including landscape conversion, ecological restoration, ecosystem resilience and collapse, spatial benefits and payments for ecosystem services. The book concludes by focusing on major policy challenges that need to be overcome in order to avert the worsening problem of ecological scarcity and how we can fund novel financing mechanisms for global conservation.
