Handbook of the Neuroscience of Aging

Handbook of the Neuroscience of Aging

A single volume of 85 articles, the Handbook of the Neurobiology of Aging is an authoritative selection of relevant chapters from the Encyclopedia of Neuroscience, the most comprehensive source of neuroscience information assembled to date (AP Oct 2008).

The study of neural aging is a central topic in neuroscience, neuropsychology and gerontology. Some well-known age-related neurological diseases include Parkinson's and Alzheimer's, but even more common are problems of aging which are not due to disease but to more subtle impairments in neurobiological systems, including impairments in vision, memory loss, muscle weakening, and loss of reproductive functions, changes in body weight, and sleeplessness. As the average age of our society increases, diseases of aging become more common and conditions associated with aging need more attention by doctors and researchers.

This book offers an overview of topics related to neurobiological impairments which are related to the aging brain and nervous system. Coverage ranges from animal models to human imaging, fundamentals of age-related neural changes and pathological neurodegeneration, and offers an overview of structural and functional changes at the molecular, systems, and cognitive levels. Key pathologies such as memory disorders, Alzheimer's, dementia, Down syndrome, Parkinson's, and stroke are discussed, as are cutting edge interventions such as cell replacement therapy and deep brain stimulation. There is no other current single-volume reference with such a comprehensive coverage and depth.

Authors selected are the internationally renowned experts for the particular topics on which they write, and the volume is richly illustrated with over 100 color figures. A collection of articles reviewing our fundamental knowledge of neural aging, the book provides an essential, affordable reference for scientists in all areas of Neuroscience, Neuropsychology and Gerontology.

* The most comprehensive source of up-to-date data on the neurobiology of aging, review articles cover: normal, sensory and cognitive aging; neuroendocrine, structural and molecular factors; and fully address both pathology and intervention

* Chapters represent an authoritative selection of relevant material from the most comprehensive source of information about neuroscience ever assembled, (Encyclopedia of Neuroscience), synthesizing information otherwise dispersed across a number of journal articles and book chapters, and saving researchers the time consuming process of finding and integrating this information themselves

* Offering outstanding scholarship, each chapter is written by an expert in the topic area and over 20% of chapters feature international contributors, (representing 11 countries)

* Provides more fully vetted expert knowledge than any existing work with broad appeal for the US, UK and Europe, accurately crediting the contributions to research in those regions

* Fully explores various pathologies associated with the aging brain (Alzheimer's, dementia, Parkinson's, memory disorders, stroke, Down's syndrome, etc.)

* Coverage of disorders and key interventions makes the volume relevant to clinicians as well as researchers

* Heavily illustrated with over 100 color figures

From reader reviews:

Antoine Harris:

Reading a guide tends to be new life style in this era globalization. With studying you can get a lot of information that will give you benefit in your life. Having book everyone in this world could share their idea. Textbooks can also inspire a lot of people. Lots of author can inspire their very own reader with their story or maybe their experience. Not only the story that share in the books. But also they write about advantage about something that you need example. How to get the good score toefl, or how to teach your children, there are many kinds of book that you can get now. The authors on this planet always try to improve their proficiency in writing, they also doing some analysis before they write to the book. One of them is this Handbook of the Neuroscience of Aging.

Stephen Beatty:

Your reading sixth sense will not betray a person, why because this Handbook of the Neuroscience of Aging e-book written by well-known writer who really knows well how to make book that could be understand by anyone who read the book. Written throughout good manner for you, still dripping wet every ideas and composing skill only for eliminate your personal hunger then you still question Handbook of the Neuroscience of Aging as good book not only by the cover but also by the content. This is one book that can break don't assess book by its cover, so do you still needing an additional sixth sense to pick that!? Oh come on your studying sixth sense already told you so why you have to listening to another sixth sense.

Heather Killen:

In this era globalization it is important to someone to obtain information. The information will make professionals understand the condition of the world. The condition of the world makes the information much easier to share. You can find a lot of referrals to get information example: internet, newspapers, book, and soon. You will observe that now, a lot of publisher that will print many kinds of book. Typically the book that recommended to you personally is Handbook of the Neuroscience of Aging this publication consist a lot of the information of the condition of this world now. This specific book was represented how can the world has grown up. The terminology styles that writer make usage of to explain it is easy to understand. The writer made some research when he makes this book. That is why this book suitable all of you.

Ana Smith:

As a university student exactly feel bored to help reading. If their teacher inquired them to go to the library or make summary for some reserve, they are complained. Just minor students that has reading's soul or real their passion. They just do what the teacher want, like asked to go to the library. They go to presently there but nothing reading significantly. Any students feel that examining is not important, boring in addition to can't see colorful photographs on there. Yeah, it is for being complicated. Book is very important to suit your needs. As we know that on this age, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore , this Handbook of the Neuroscience of Aging can make you truly feel

more interested to read.
