## Sustainable Development of Multifunctional Landscapes

New demands on landscapes and natural resources call for multifunctional approaches to land development. Tools are required to identify the effects of land management on landscape sustainability and to support the decision-making process on the multipurpose utilisation of landscape resources. Scientists from across Europe installed the "Landscape Tomorrow" network to be prepared for new challenges in research to sustainable land development in an international perspective. This publication analyses general principles of landscape multifunctionality, develops methods to assess the sustainability of agricultural and forestry land management and identifies strategies of sustainable land management. Moreover, it contributes to the scientific basis for future land development strategies and helps support land use decision-making on the political, planning and management level.
